Mr. Gannon:

I live near the Haw River, close to Saxapahaw and my family relies on a well on our property to supply our drinking water. I drive over the Haw daily on my way to work. I feel that the health of the Jordan Lake watershed (including the Haw River) is vitally important to all of us. With an increasing number of citizens relying on it for water, recreational opportunities, etc. and with global warming creating the possibility of more frequent drought conditions, we have to be proactive about protecting the water quality of the watershed. I fully support the NC EMC proposed rules to ensure the health of the Jordan Lake watershed. The proposed regulations can be improved by requiring wastewater treatment plant upgrades by 2011 and by setting specific guidelines for local governments for controlling runoff from existing development.

Thank you very much for your time.

David G. Hill  
Saxapahaw, NC
